LEGALEASE – AI

PHASE 2 • REQUIREMENTS ANALYSIS

1. Purpose of Requirement Analysis

This phase converts the Phase 1 idea into clear requirements for building LegalEase. It identifies what the application must do, what users need, and the quality expected from the system.

2. Stakeholder / User Requirements

- Users should be able to choose the required legal document type.
- Users should enter necessary details through a simple form.
- Users should receive a generated first draft based on their inputs.
- Users should be able to review and edit the generated document.
- Users should be able to download the final draft.

3. Basic Requirement Flow

User need → Input details → System processes request → AI generates draft → User reviews → Document is downloaded

4. Functional Requirements

Functional requirements describe the main tasks and services that LegalEase must provide.

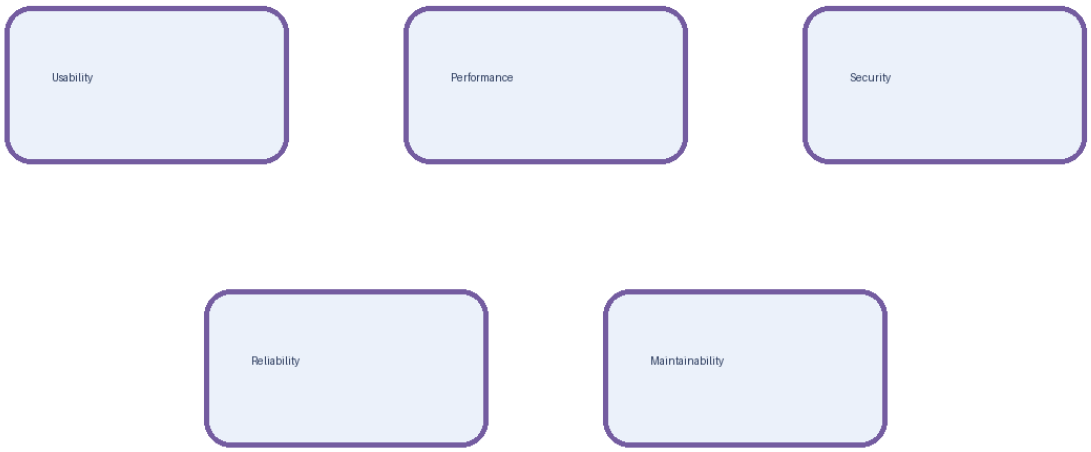

- Document Type Selection – provide a list of supported document types.
- User Input Form – collect required names, dates, terms and other relevant details.
- Input Validation – check required fields before generation.
- AI Document Generation – create a structured first draft from the supplied information.
- Preview & Editing – display the generated content and allow changes.
- Download – provide output in PDF, DOCX and TXT formats.
- Error Handling – show a clear message when input or generation fails.

5. Functional Goal

The complete workflow should be simple enough for a first-time user to understand without needing technical knowledge.

LEGALEASE – AI

REQUIREMENTS ANALYSIS • NON-FUNCTIONAL REQUIREMENTS

6. Non-Functional Requirements

Non-functional requirements describe how well the system should work.

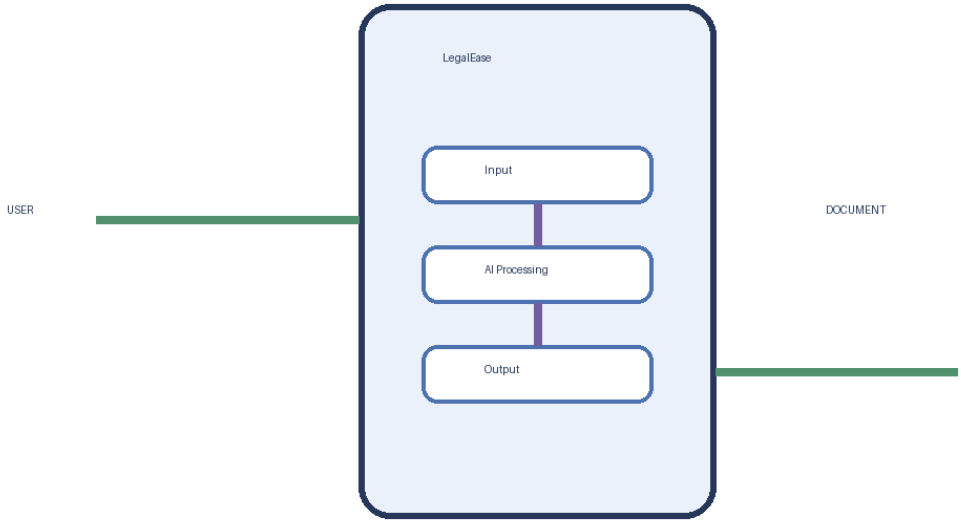

- Usability – interface should be simple, clear and easy to navigate.
- Performance – common requests should be processed without unnecessary delay.
- Reliability – the application should handle normal errors without crashing.
- Security – user-provided information and API credentials should be handled securely.
- Maintainability – code and modules should be organized so future changes are easier.
- Compatibility – the application should work in the intended supported browser/environment.
- Scalability – the design should allow additional document types to be added later.

7. Quality Expectation

LegalEase should be useful, understandable and consistent while clearly presenting that generated documents are informational drafts.

LEGALEASE – AI

REQUIREMENTS ANALYSIS • SYSTEM & DATA REQUIREMENTS

8. System Requirements

- Python environment for application development.
- Streamlit for the user interface.
- FastAPI for backend/API processing where required.
- Gemini AI API for AI-generated document content.
- Document-generation/download libraries for supported formats.
- A modern web browser for accessing the application.

9. Data / Input Requirements

- Selected document type.
- Names and relevant party details.
- Dates, addresses and document-specific information.
- Terms, amounts or other fields required by the selected document type.

10. Output Requirements

- Readable generated first-draft document.
- Preview/editable content before download.
- Downloadable PDF, DOCX and TXT versions where implemented.

11. Requirement Analysis Outcome

Phase 2 establishes the functional, non-functional, system, input and output requirements needed for the next stage: Phase 3 – Project Design.

NEXT PHASE → PROJECT DESIGN
